Automatic PTH and Desmear Process Line

Major the desmear intention. The copper side piece of the in bore layer residuary or ethoxyline can use the chemical micro etch to cleaning, obtain the satisfactory to contact facial, better to bristly of the in bore layer facial, increase the copper layer adhesion.

Important: the working station, of the PTH craft, after the drilling, depend on the metallic, both the copper platinum will be plating, credible the metallic technicality, for marketing, utilization more the hot dispose to PTH layer, neither the generate cast for the differentiate.

This PTH and Desmear Process Line can be made by the requirement of the PCH specification and production capacity from clients
